1 Executive Summary

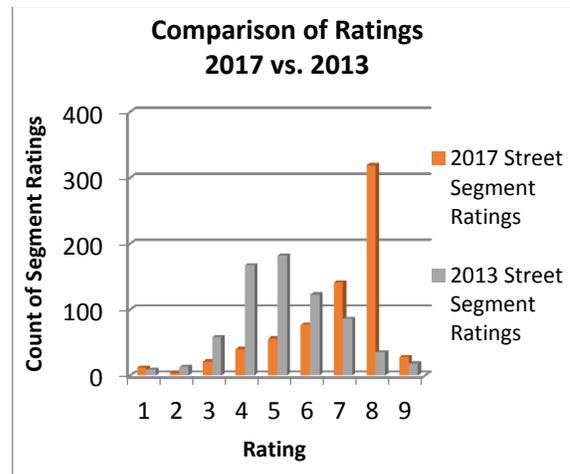

The City of La Porte has retained HDR Engineering, Inc. (HDR) to perform an update to the 2013 Street Condition Assessment Planning Document. During the update, HDR reassessed streets associated with the 2013 document with the inclusion of approximately seven streets that were constructed after 2013. Approximately 128 miles of roadway was assessed during the update. The streets were updated by performing a visual inspection of the current street condition along with any applicable changes in the street attributes such as pavement type or width. This was accomplished by means of driving the streets as well as walking a portion of the streets.

Upon completion of the field data collection, the information was updated and imported into GIS to show a visual representation of street condition as well as a layout of the paving surface material throughout the City. With the advantage of having this data in GIS, the City can inventory streets based on their condition or to identify areas in which streets may be grouped into repair and maintenance projects.

The data was also processed in tabular form in which the condition ratings and attributes of each street were analyzed, and cost estimates were prepared according to each rating. A level of paving rehabilitation was associated with each rating based on methods currently used by the City.

After analyzing the recent data and comparing it to the 2013 data, there were noticeable changes in the street conditions. A number of streets had maintenance, repairs or reconstruction performed since the previous assessment. Looking at Figure 1-1, there is a significant comparison of ratings in which the overall street ratings have improved since the previous assessment. There was a major shift of ratings to the 8 rating. This is due in large to the paving program that City has implemented over the past few years to help improve or maintain the condition of the roadways. It is noted that these improvements can help prolong the condition of the pavement; however there are many factors that contribute to the degradation of the pavement even after repairs are made.

Figure 1-1 Comparison of Ratings (2017 vs. 2013)

The update to the street condition assessment document provides a visual snapshot of the City's progress and also helps realign the paving program to focus on current demands while also helping to budget them accordingly.

2 Background

2.1 City of La Porte Streets

The City of La Porte currently manages approximately 128 miles of roadway which requires a considerable amount of funding to be appropriated for repairs and maintenance. In 2013, the City implemented a planning document to help conduct repairs and maintenance, in which the street condition was used as a main cost factor to plan and manage the maintenance, repairs and reconstruction.

The document helped assess which streets would require what degree of rehabilitation and the approximate associated budget to bring the street condition back to an acceptable level.

City Pavement

Approximately 62% of City streets are made of concrete, while approximately 37% is made of asphalt and the remaining 1% is gravel or unimproved.

2.2 Updates to the Street Condition Assessment Planning Document

The City retained HDR in 2016 to perform updates to the 2013 Street Condition Assessment Planning Document prepared by HDR. This update will help the City realign budgeting for repairs and maintenance and help identify which streets to include in the budget. During this reassessment, the condition of city owned streets and attributes such as segment rating, street length, street width, pavement type, level traffic and approximate cost were updated accordingly. Streets that were inspected by the City under the “Open-Up” policy in 2013 were also assessed and updated.

3 Scope of Services

3.1 Inventory Update

All streets that were designated by the City as City owned or were previously inspected by the City as part of the “Open Up” policy were included in the inventory. Existing data from the previous assessment includes the street designation, street name, length and width of the street, rating, and level of traffic. These attributes were once again used to develop the updates to the budgetary cost.

3.2 Data Collection

For the update, field data was collected using information from the inventory that was developed from the previous assessment. A GIS (geographical information system) application was used as a component to update the current inventory with data collected in the field. Pertinent field data that was collected or updated

includes the pavement type, width, a visual inspection of deterioration by rating system, and level of traffic. The associated budgetary cost based on current conditions was updated accordingly.

3.3 Condition Evaluation and Rating

The same condition evaluation was used to determine the rating of each street that was listed in the inventory. The pavement type, rigid or flexible, was rated accordingly as they experience different deterioration levels. Table 3-1 below shows the pavement condition rating system and what generally identified with each level of distress. As found in the table, there are a number of deficiencies associated with each level of deterioration.

Table 3-1. Pavement Condition Rating System		
Rating	Rigid Pavement	Flexible Pavement
9 (best)	<ul style="list-style-type: none"> • New or recent maintenance or construction • Very slight cracking • Good rideability • Good joint sealing 	<ul style="list-style-type: none"> • New or recent maintenance or construction • Very slight cracking • Good rideability
8	<ul style="list-style-type: none"> • Slight to very slight cracking • Recent maintenance or construction • Good rideability • Good joint sealing 	<ul style="list-style-type: none"> • Slight to very slight cracking • Recent maintenance or construction • Good rideability
7	<ul style="list-style-type: none"> • Slight cracking • Slight spalling at the joints • Very slight polished surface • Good rideability • Good/fair joint sealing 	<ul style="list-style-type: none"> • Slight edge and slippage cracking • Slight to very slight transverse and longitudinal cracking • Good/fair rideability
6	<ul style="list-style-type: none"> • Slight/moderate cracking • Slight/moderate spalling at the joints • Very slight corner breaks • Slightly polished surface • Fair/good rideability • Fair joint sealing 	<ul style="list-style-type: none"> • Frequent edge and slippage cracking • Slight transverse and longitudinal cracking • Very slight alligator cracking • Very slight channeling • Fair/good rideability
5	<ul style="list-style-type: none"> • Frequent cracking • Frequent spalling at the joints • Slight corner breaks • Slight faulting • Slight/moderate polishing • Fair rideability • Fair joint sealing 	<ul style="list-style-type: none"> • Frequent edge and slippage cracking • Slight block cracking • Slight alligator cracking • Slight channeling • Fair rideability
4	<ul style="list-style-type: none"> • Frequent moderate cracking • Frequent moderate spalling at the joints • Moderate corner breaks • Slight/moderate faulting • Moderately polished surface • Fair/poor rideability • Fair/poor joint sealing 	<ul style="list-style-type: none"> • Moderate edge and slippage cracking • Block cracking • Alligator cracking • Channeling • Fair/poor rideability

Table 3-1. Pavement Condition Rating System		
Rating	Rigid Pavement	Flexible Pavement
3	<ul style="list-style-type: none"> Severe cracking (wide and long) Moderate faulting Severely polished surface Poor rideability Poor joint sealing 	<ul style="list-style-type: none"> Moderate/severe edge and slippage cracking Moderate/severe alligator cracking Moderate channeling Poor/fair rideability
2	<ul style="list-style-type: none"> Intermittent broken slabs/severe cracking Surface is rough and uneven Moderate/severe faulting Poor rideability Very poor joint sealing 	<ul style="list-style-type: none"> Severe edge cracking/breaking Severe alligator cracking Moderate/severe channeling Poor rideability
1 (worst)	<ul style="list-style-type: none"> Extensive severe cracking/broken panels Severe faulting Very poor rideability <i>Street may be unimproved</i> 	<ul style="list-style-type: none"> Extensive severe cracking/pavement missing Severe channeling Very poor rideability Pavement does not exist (applies to certain streets) <i>Street may be unimproved</i>

3.4 Recommended Budgetary Cost

A recommended budgetary cost was developed in the previous document using the collected data and the deterioration level associated with each street. The data associated with each street (i.e. street width, level of traffic, etc.) was updated during the assessment and was used to compute the budgetary cost associated with each street. Coordination with the City on repair/maintenance methods that are typically used, whether in-house or contracted, was also performed to help identify costs associated with the applicable method of repair/maintenance.

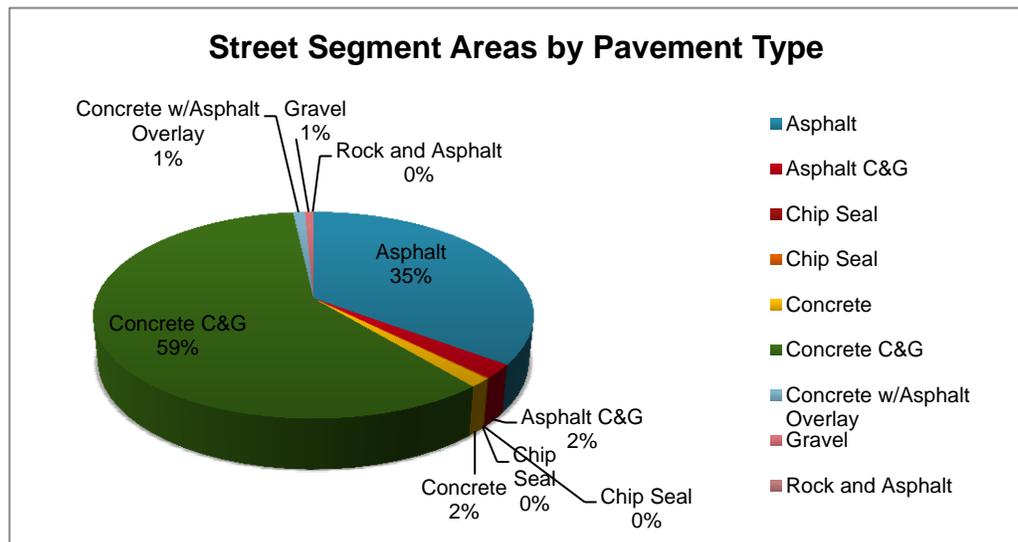

3.5 Updates to GIS Mapping (Geographical Information Systems)

The City currently uses GIS online services to provide information such as utility mapping to help manage current assets. To keep consistent with this model, the field data was collected using a GIS application which allowed updates to be collected in real-time and provide a better degree of findings. The collected data was updated in GIS to provide a refreshed Street Condition Assessment Map (see Exhibit 1) of the current conditions and updated tables to display the street attributes.

4 Paving Condition Assessment

The City of La Porte manages four main designations of street paving types: asphalt roadway (ASP), asphalt roadway with curb and gutter (ACG), concrete roadway (CON), and concrete roadway with curb and gutter (CCG). There are a few segments which are categorized as gravel, asphalt and rock, or undeveloped. The City also has a few street segments that were chip sealed as part of an in-house paving program; however the City no longer utilizes this method of repair or maintenance. If the roadway was determined to be private, state, or county, no evaluation was performed. Figure 4-1 shows the area of street segments based on pavement type. An area majority of City streets are categorized as concrete curb and gutter which makes up approximately 59 percent of the total paving area with asphalt being the second largest at approximately 35 percent of the total paving area.

Figure 4-1 Area of Street Segments by Pavement Type

Approximately seven streets were added to the list of streets to be assessed since the previous assessment. Some of these streets were recently constructed as a result of new residential construction. The updated street inventory table is included in the Appendix section of this document.

The pavement condition rating system in Table 3-1 was the same rating system applied in 2013 and was also used to rate each respective street for the 2017 street pavement condition assessment. As a reminder, the rating system consists of nine (9) total ratings (9-best and 1-worst), was used to update the segments. Upon visual inspection, the street rating was updated accordingly along with the applicable attributes. A breakdown of the condition ratings for all streets is included in the Appendix section of this document.

Table 4-1 below outlines the proposed improvements according the pavement rating condition that was received during inspection. The proposed improvements range from minor crack sealing to full reconstruction of the streets.

Table 4-1. Schedule of Repairs and Maintenance	
PAVEMENT CONDITION RATING	PROPOSED IMPROVEMENTS
9	No Improvements Required
8	No Improvements Required
7	Minor Crack Sealing on All Pavement Types
6	Major Crack Sealing on All Pavement Types
5	10 to 20% Partial Base Repair & Overlay – Asphalt 10 to 20% Minor Concrete Point Repair – Concrete
4	20 to 30% Major Base Repair & Overlay – Asphalt 20 to 30% Major Concrete Point Repair – Concrete
3	30 to 40% Major Base Repair & Overlay – Asphalt 30 to 40% Major Concrete Point Repair – Concrete
2	Full Depth Reclamation/ Stabilization & Overlay – Asphalt Remove and Replace – Concrete
1	Full Depth Reclamation/ Stabilization & Overlay – Asphalt Remove and Replace – Concrete

During the data collection portion of the assessment, it was apparent that many of the streets had been repaired or had some maintenance performed since the 2013 assessment. There were a few streets, such as Catlett Ln., Belfast Rd. and Piney Brook that had been reconstructed as well. Having these repairs or maintenance performed improved the rating of these streets and the system overall. If maintenance, repairs or reconstruction was performed, those streets were identified with a rating of 8 or 9 as there are no recommended repairs or maintenance for that street segment at the time of the visual inspection. Figure 4-2 shows the percentage of total ratings that were identified in the 2017 update while Figure 4-3 shows the previous ratings collected during the 2013 update. In comparison, there was a significant increase of street segments identified as a rating of 8 while there were significant decreases in ratings 4 through 6.

Figure 4-2 Percentage of Total Ratings - 2017

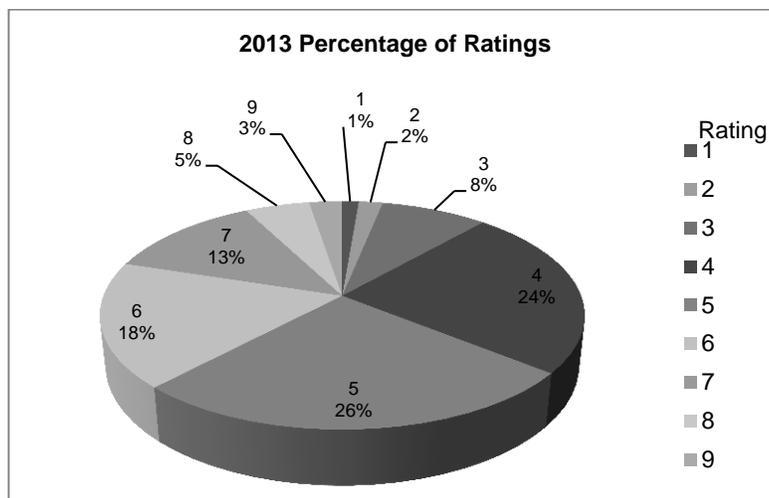

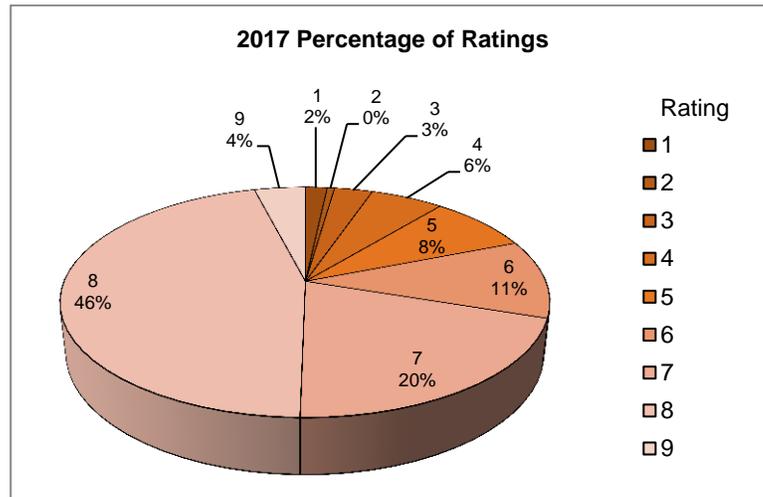

Figure 4-3 Percentage of Total Ratings - 2013

Looking at Figure 4-4 and Figure 4-5, the ratings have also been interpreted by showing the pavement type and total count of each rating. The pavement types were categorized by concrete, asphalt, and other (i.e. gravel, unimproved). A majority of the segments rated in 2017 are associated with ratings ranging from 6 to 8 while a majority of the segments rated in 2013 appear to be associated with ratings ranging from 3 to 7.

Figure 4-4 Street Rating Count by Pavement Type - 2017

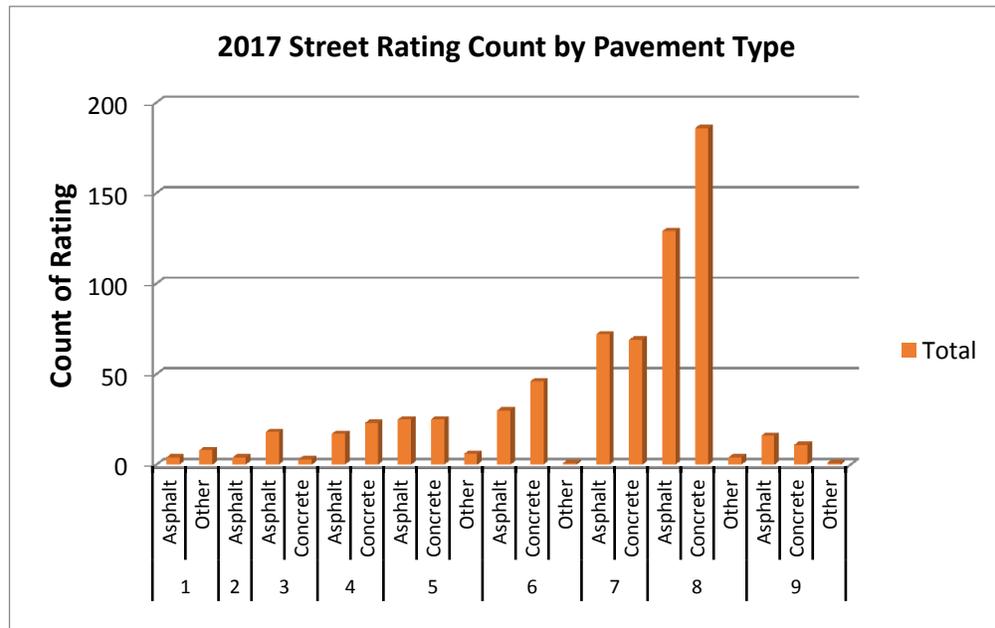

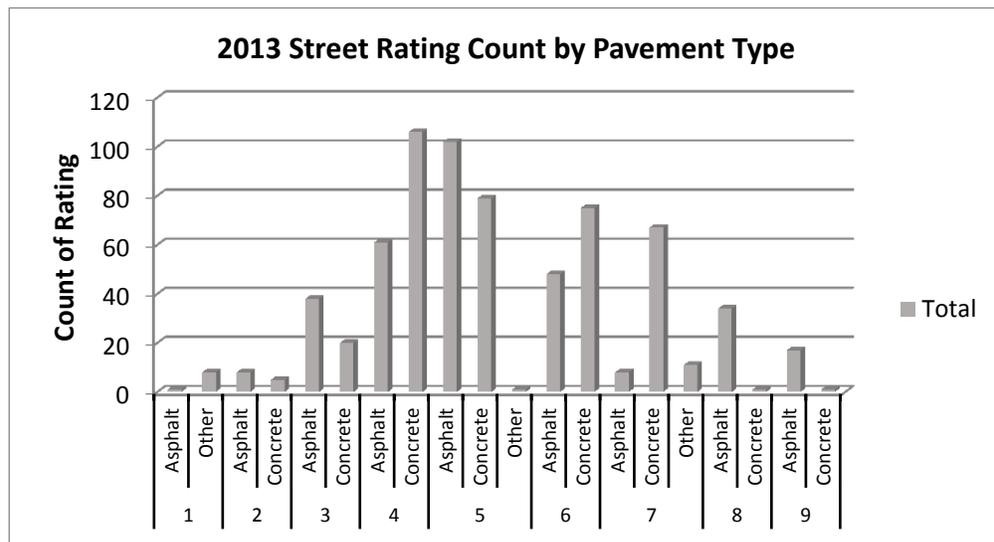

Figure 4-5 Street Rating Count by Pavement Type - 2013

In comparison, by proactively performing the repairs and maintenance, the general visual condition of City streets has been prolonged. Maintaining a balanced City wide paving program will be the key essential to allow budgeting for much needed repairs while also providing routine maintenance to streets.

5 Budgetary Cost Data

Budgetary cost data was updated by using recent cost data associated with the proposed maintenance and repairs based on each of the pavement condition ratings. This was applied to the approximate square yardage of each individual street or segment to develop an approximated cost to perform the associated maintenance or repairs. As a reminder, the cost data includes the estimated construction cost for each of the improvements, estimated professional service fees (i.e. engineering, surveying, geotechnical, testing, etc.). This budgeting takes into account costs that may be required as a result of repair and maintenance. It is noted that cost of materials and construction costs can escalate based on the condition of the economy. The suggested prices reflect historical and current pricing for performing such repairs and maintenance. The updated cost tables have been prepared and included in the *Appendix* section of this document.

The budgetary cost data also includes options developed by the City to perform maintenance and repairs on streets “in-house”. The prices for these options were provided by City personnel and should be used at their discretion. Repair costs reflected otherwise are recommendations based on current improvement data as previously mentioned.

6 Closing and Recommendations

As a result of implementing a paving program that has identified reconstruction, repair and maintenance needs, the City of La Porte has been able to improve the visual condition of City streets. The updates provided in the planning document include necessary data and information to assist the City in performing repairs and maintenance in an organized and budgeted manner. As previously mentioned, it is recommended that the condition of the streets be updated when new information becomes available (i.e. new streets, reconstruction, repairs, and maintenance performed). This will help keep the information current for budgeting purposes and keep the GIS mapping current as well.

HDR Engineering, Inc. would like to thank the City of La Porte for allowing us the opportunity to provide consulting services and to conduct this update to the paving assessment planning document. HDR Engineering, Inc. looks forward to assisting the City of La Porte on future engineering requests.

Sincerely,

HDR ENGINEERING, INC.

Minor Joint & Crack Sealing

Item	Description	Quantity	Unit	Concrete Unit Cost	Asphalt Unit Cost
1	Joint and Crack sealing to include crack sealing with bituminous material, joint sealing with silicone material, including cleaning and preparation	1	SY	\$3.00	\$0.30
2	Construction Contingency (10%)	1	SY	\$0.30	\$0.03
3	Subtotal Construction	1	SY	\$3.30	\$0.33
4	Engineering Design & Construction Administration (12%)	1	SY	\$0.40	\$0.04
5	Subtotal Professional Services	1	SY	\$0.40	\$0.04
	Total Estimated Project Cost	1	SY	\$3.70	\$0.37

Notes: Joint and Crack sealing unit cost is based on \$0.40/LF of crack sealing of asphalt and \$4.00/LF of crack and joint sealing of concrete and a factor of 0.75 LF cracking/SY of roadway.

Major Joint & Crack Sealing

Item	Description	Quantity	Unit	Concrete Unit Cost	Asphalt Unit Cost
1	Joint and Crack sealing to include crack sealing with bituminous material, joint sealing with silicone material, including cleaning and preparation	1	SY	\$6.00	\$0.60
2	Construction Contingency (10%)	1	SY	\$0.60	\$0.06
3	Subtotal Construction	1	SY	\$6.60	\$0.66
4	Engineering Design & Construction Administration (12%)	1	SY	\$0.79	\$0.08
5	Subtotal Professional Services	1	SY	\$0.79	\$0.08
	Total Estimated Project Cost	1	SY	\$7.39	\$0.74

Notes: Joint and Crack sealing unit cost is based on \$0.40/LF of crack sealing of asphalt and \$4.00/LF of crack and joint sealing of concrete and a factor of 1.5 LF cracking/SY of roadway.

Point Repairs - 10-20%

Item	Description	Quantity	Unit	Concrete Unit Cost	Asphalt Unit Cost
1	Point Repair by removal and replacement of existing base and pavement	1	SY	\$15.00	\$9.75
2	Striping and Traffic Control	1	SY	\$2.45	\$2.45
3	Construction Contingency (15%)	1	SY	\$2.25	\$1.46
4	Subtotal Construction	1	SY	\$19.70	\$13.66
5	Engineering Design & Construction Administration (12%)	1	SY	\$2.36	\$1.64
6	Surveying & Geotechnical (5%)	1	SY	\$0.99	\$0.68
7	Testing (5%)	1	SY	\$0.99	\$0.68
8	Subtotal Professional Services	1	SY	\$4.33	\$3.01
	Total Estimated Project Cost	1	SY	\$24.03	\$16.67

Notes: Minor point repair unit cost is based on performing point repairs on 15% of the roadway at \$100 per square yard for concrete and \$65 per square yard for asphalt. Asphalt includes overlay.

Point Repairs - 20-30%

Item	Description	Quantity	Unit	Concrete Unit Cost	Asphalt Unit Cost
1	Point Repair by removal and replacement of existing base and pavement	1	SY	\$25.00	\$16.25
2	Striping & Traffic Control	1	SY	\$2.45	\$2.45
3	Construction Contingency (15%)	1	SY	\$3.75	\$2.44
4	Subtotal Construction	1	SY	\$31.20	\$21.14
5	Engineering Design & Construction Administration (12%)	1	SY	\$3.74	\$2.54
6	Surveying & Geotechnical (5%)	1	SY	\$1.56	\$1.06
7	Testing (5%)	1	SY	\$1.56	\$1.06
8	Subtotal Professional Services	1	SY	\$6.86	\$4.65
	Total Estimated Project Cost	1	SY	\$38.06	\$25.79

Notes: Major point repair unit cost is based on performing point repairs on 25% of the roadway at \$100 per square yard for concrete and \$65 per square yard for asphalt. Asphalt includes overlay.

"In-House" Mill and Overlay Asphalt Streets - 20-30% Repair Alternate

Item	Description	Quantity	Unit	Asphalt Unit Cost
1	"In-House" Mill and Overlay Asphalt Streets. Includes 2" Milling, 2" Type D Level up Course, and 2" Type D Surface Course Including Labor.	1	SY	\$22.15
2	Striping & Traffic Control	1	SY	\$0.10
3	Construction Contingency (2.2%)	1	SY	\$0.49
4	Subtotal Construction	1	SY	\$22.74
5	Engineering Design & Construction Administration (0.5%)	1	SY	\$0.11
6	Surveying & Geotechnical (0.1%)	1	SY	\$0.02
7	Testing (0.1%)	1	SY	\$0.02
8	Subtotal Professional Services	1	SY	\$0.16
	Total Estimated Project Cost	1	SY	\$22.90

Notes: Alternate cost based on cost data supplied by the City of La Porte for Milling and Overlay Asphalt Streets. Cost based on \$22.15.00 for 2"mill with a Type D level up course and Type D surface course including labor.

Point Repairs - 30-40%

Item	Description	Quantity	Unit	Concrete Unit Cost	Asphalt Unit Cost
1	Point Repair by removal and replacement of existing pavement	1	SY	\$35.00	\$22.75
2	Striping & Traffic Control	1	SY	\$2.45	\$2.45
3	Construction Contingency (15%)	1	SY	\$5.25	\$3.41
4	Subtotal Construction	1	SY	\$42.70	\$28.61
5	Engineering Design & Construction Administration (12%)	1	SY	\$5.12	\$3.43
6	Surveying & Geotechnical (5%)	1	SY	\$2.14	\$1.43
7	Testing (5%)	1	SY	\$2.14	\$1.43
8	Subtotal Professional Services	1	SY	\$9.39	\$6.29
	Total Estimated Project Cost	1	SY	\$52.09	\$34.91

Notes: Major point repair unit cost is based on performing point repairs on 35% of the roadway at \$100 per square yard for concrete and \$65 per square yard for asphalt. Asphalt includes overlay.
